Hiring Manager
Pearson plc
Bangalore / Chennai, India

Re: Software Engineer III (Full Stack) — Pearson

Dear Hiring Manager,

I am writing to express my interest in the Software Engineer III (Full Stack) position at Pearson. With over 4.5 years of software development experience — currently as a Senior Associate Consultant at Infosys — I have built and shipped scalable backend systems using Java and Spring Boot, and I am eager to bring that experience to Pearson's mission of transforming digital learning at global scale.

In my current role at Infosys, I design and maintain RESTful APIs and microservices that handle real-world throughput demands, including a data pipeline that processes approximately 10,000 EDI files daily on Azure. I manage containerized deployments end-to-end using Docker, Kubernetes, and Helm, with GitHub Actions driving the CI/CD pipeline. I also conduct code reviews and mentor junior engineers, which has sharpened my ability to uphold clean code standards while keeping delivery velocity high — responsibilities that map closely to what Pearson is looking for.

Prior to Infosys, at FIS Solutions I worked on a Wealth Management platform serving multiple banking clients, where I delivered SWIFT compliance enhancements and cross-server data transfer mechanisms. That experience gave me a strong grounding in writing reliable, maintainable code under strict correctness requirements.

I am confident that my background in Java, Spring Boot, microservices, Docker/Kubernetes, and CI/CD makes me a strong fit for this role. I would welcome the opportunity to discuss how I can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Anchit Bhushan
