Hiring Team
Lenskart Group
Bengaluru, Karnataka, India

Dear Hiring Team,

I came across the Software Developer - Java Backend opening at Lenskart and wanted to reach out. I have spent the last 4.5 years working on Java and Spring Boot backends — first at FIS Solutions and now at Infosys — and the kind of work described in the JD is pretty much what I have been doing day to day.

At Infosys, most of my work has been around building microservices and REST APIs, setting up event-driven pipelines (Kafka), and keeping things running reliably on Azure/AWS with Docker and Kubernetes. I work with MySQL and MongoDB regularly, and I have used Redis for caching in a few projects. I also do a fair bit of code reviews and have mentored a couple of junior engineers on the team, so the ownership aspect mentioned in the role is something I am comfortable with.

Before that, at FIS Solutions, I worked on a global Wealth Management platform — Java backend, multi-client, compliance-heavy. The SWIFT Standards Update 2023 was one of the bigger things I picked up there. It was not glamorous work, but it taught me a lot about writing backend code that cannot afford to break.

Lenskart stood out to me because of the multi-brand, multi-geography scope. I have not worked in retail tech before, but the backend problems, scalable APIs across regions — are familiar territory. I think I could get up to speed quickly and contribute meaningfully.

Happy to chat if you think there is a fit. Thanks for taking the time.

Sincerely,

Anchit Bhushan
